

AGSORB®

25/80 LVM ^{gray} MS

PRODUCT DESCRIPTION

This fine sized granule has our highest particle count for applications that demand the highest level of coverage of treatment areas. Its characteristics make it well suited as a carrier in crop protection and turf/ornamental applications.

MINERAL DESCRIPTION

AGSORB® from Ripley, Mississippi is a Montmorillonite mineral in the non-swelling bentonite class. Its low bulk density and high absorptivity allows higher liquid holding capacity. Our mineral processing maximizes the granule's micropore space. AGSORB® heat treatments impart a hard, inert granule with a high resistance to attrition.
